Brainstorming & Idea Prioritization

Date	30 September 2026
Team ID	SWTID-2026-3818
Project Name	Auto_Ticket_Classification_Using_Flow_Diagram
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member listed as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Ramalaskhmi Nachiyar L	Classify support tickets into categories (Network, Hardware, Software, etc.) using TF-IDF + a machine learning model	ML Model	1
2	Ramalaskhmi Nachiyar L	Compare Logistic Regression, Naive Bayes and Linear SVM and pick the most accurate one	ML Model	1
3	Sandhiya S	Clean the ticket text: lowercase, remove punctuation and stop-words, lemmatise	Data Preparation	1
4	Sandhiya S	Predict ticket priority (High / Medium / Low) from urgent keywords and model output	Priority	2
5	Bala Krishnammal S	Generate a flow diagram for every ticket showing how it moved from submission to the assigned team	Flow Diagram	3
6	Bala Krishnammal S	Simple web form where users type their issue and instantly see category, priority and flow diagram	User Interface	3
7	Kalyani M	Automatically route each ticket to the responsible support team and notify the user	Automation	4
8	Kalyani M	Let agents correct wrong predictions and reuse the corrections to retrain the model	Feedback Loop	5
9	Ramalaskhmi Nachiyar L	Admin dashboard with charts: tickets per category, average confidence, resolution status	Analytics	6
10	Sandhiya S	Chatbot that collects the ticket details step by step (future scope)	Future Scope	7

Step 2: Idea Prioritization

Each grouped idea was rated on feasibility and importance, then the final ideas to move forward with were selected.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	ML-based automatic ticket classification	High	High	P1	Yes
2	Ticket priority prediction	High	Medium	P2	Yes
3	Flow diagram generation and simple web UI	High	High	P1	Yes
4	Automatic routing and notification	Medium	High	P2	Yes
5	Agent feedback and model retraining	Medium	Medium	P3	Yes

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
6	Admin analytics dashboard	Medium	Medium	P3	Yes
7	Chatbot-based ticket intake	Low	Medium	P4	No (future scope)

Final decision: Build a web application that automatically classifies IT support tickets and shows the ticket journey as a flow diagram (Groups 1 to 6). The chatbot idea is kept for future scope.
