Coding & Solution

Date	30 September 2026
Team ID	SWTID-2026-3818
Project Name	Auto_Ticket_Classification_Using_Flow_Diagram
Maximum Marks	5 Marks

This section evaluates the quality and completeness of the implemented code and the overall solution. The code repository link and status fields must be updated once development is complete.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub link here]
Programming Language(s)	Python 3.10+, HTML, CSS, JavaScript
Framework(s) Used	Flask, scikit-learn, NLTK, Graphviz, SQLite
Key Features Implemented	[Update after development: list the features that are working]
Pending / Incomplete Features	• Ticket form and result page • ML classifier and priority prediction • Flow diagram generation • Routing and SQLite storage • Agent feedback and retraining • Admin dashboard (Remove each item as it is completed)
Setup / Run Instructions	1. Clone the repository and open the folder. 2. Create a virtual environment: python -m venv venv and activate it. 3. Install dependencies: pip install -r requirements.txt 4. Install Graphviz on the system and add it to PATH. 5. Train the model: python src/train_model.py 6. Start the app: python app.py 7. Open http://127.0.0.1:5000 in the browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organised into functions / classes	[Update]
2	Meaningful variable and function names are used	[Update]
3	Code includes comments / documentation where necessary	[Update]
4	Error handling is implemented for critical operations	[Update]
5	The application runs without critical errors	[Update]
6	Code is committed to a version control repository	[Update]

Additional Notes / Comments

[Add any notes, known issues or references here]
