Define Problem Statements

Date	30 September 2026
Team ID	SWTID-2026-3818
Project Name	Auto_Ticket_Classification_Using_Flow_Diagram
Maximum Marks	3 Marks

Customer Problem Statement: a problem statement written from the customer's point of view helps the team focus on what matters and empathise with the people who use the solution.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee / student who faces an IT problem	Get my problem (Wi-Fi, login, software) solved quickly	My ticket waits in a general queue for hours	Someone must read it and decide which team should handle it	Frustrated and unsure when help will come
PS-2	A support agent handling many tickets every day	Work only on tickets that belong to my team	Many tickets are wrongly categorised or unclear	Manual sorting is slow and depends on personal judgement	Overloaded and stressed
PS-3	An IT support manager	Keep response times low and distribute work fairly	I cannot see how tickets move through the process	Classification and routing are done by hand and not tracked visually	Worried about delays and missed deadlines

Consolidated problem statement

Support teams receive a large number of free-text tickets. Sorting them manually into the correct category and team is slow, inconsistent and hard to track. This delays resolution and reduces user satisfaction. There is a need for a system that classifies tickets automatically and makes the ticket journey visible through a flow diagram.
