Empathy Map

Date	30 September 2026
Team ID	SWTID-2026-3818
Project Name	Auto_Ticket_Classification_Using_Flow_Diagram
Maximum Marks	4 Marks

The empathy map captures what the user Says, Thinks, Does and Feels about the problem this project addresses.

SAYS	**THINKS**
• "My internet is down and nobody has replied to my ticket." • "Why is my ticket sitting in the wrong department?" • "Can someone tell me who is working on this?"	• "Raising a ticket is a waste of time if nobody reads it." • "I am not sure which category to choose." • "Someone should sort these automatically."
PERSONA: **Priya** IT support agent / help-desk user at a college or company (handles 40 to 60 tickets a day)	
DOES	**FEELS**
• Reads every ticket and decides the category by hand • Forwards tickets to other teams and follows up by email or phone • Checks the queue repeatedly for urgent issues	• Stressed when the queue keeps growing • Frustrated by wrongly assigned tickets • Relieved when a ticket reaches the right team the first time

Insight: Users and agents both want the ticket to reach the right team quickly and want visibility of what is happening. Automatic classification and a visual flow diagram address both needs.
