Performance Testing

Date	30 September 2026
Team ID	SWTID-2026-3818
Project Name	Auto_Ticket_Classification_Using_Flow_Diagram
Maximum Marks	5 Marks

Performance testing evaluates how the system behaves under expected and peak load. Fill in the actual values after running the tests.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Locust (load) and Postman (API checks)
Type of Testing	Load Testing and Spike Testing
Target Module / API	POST /classify (ticket classification endpoint)
Test Environment	Local machine (Flask server)
Test Date	[dd-mm-yyyy]

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Normal load: users submit one ticket every few seconds	10	60	All requests succeed; avg response < 2 s
2	Moderate load	25	60	No errors; avg response < 2 s
3	Peak load	50	120	Error rate < 1%; max response < 5 s
4	Spike: sudden increase in users	100	30	App stays available and recovers

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	[ ]	[ ]	
2	Response Time (Max)	< 5 seconds	[ ]	[ ]	
3	Throughput (Req/sec)	[Set target]	[ ]	[ ]	
4	Error Rate	< 1%	[ ]	[ ]	
5	CPU Utilization	< 80%	[ ]	[ ]	
6	Memory Utilization	< 80%	[ ]	[ ]	

Step 4: Observations & Analysis

[Write your observations here: which scenario was slowest, any errors, and improvements made]

Step 5: Screenshots / Evidence

[Attach Locust report screenshots, graphs or Postman results here]
