Problem-Solution Fit Canvas

Date	30 September 2026
Team ID	SWTID-2026-3818
Project Name	Auto_Ticket_Classification_Using_Flow_Diagram
Maximum Marks	5 Marks

The canvas checks that the proposed solution addresses the root causes, behaviours and limitations of the target audience.

<table>
<tr>
<td>1. CUSTOMER SEGMENT(S) [CS]
Employees / students raising IT tickets
Support agents
IT support managers</td>
<td>6. CUSTOMER LIMITATIONS [CL]
Limited time and technical knowledge
Small support team, low budget
Only basic devices / browsers</td>
<td>5. AVAILABLE SOLUTIONS [AS]
Manual sorting by agents: flexible but slow and inconsistent
Paid ticketing tools with AI: accurate but costly and complex</td>
</tr>
<tr>
<td>2. PROBLEMS / PAINS + ITS FREQUENCY [PR]
Tickets wait for manual sorting (daily)
Wrong category / team (often)
No visibility of ticket journey (daily)</td>
<td>9. PROBLEM ROOT / CAUSE [RC]
Tickets are free text with no fixed format
Classification depends on individual agents
No automated tool linked to routing</td>
<td>7. BEHAVIOUR + ITS INTENSITY [BE]
Users choose a random category or mail the team directly (high)
Agents re-check and forward tickets manually (high)</td>
</tr>
<tr>
<td>3. TRIGGERS TO ACT [TR]
Growing queue and missed deadlines
Complaints from users
Manager wants faster response</td>
<td>10. YOUR SOLUTION [SL]
A web app that classifies ticket text with ML, predicts priority, routes it to the right team and displays a flow diagram of the ticket journey.</td>
<td>8. CHANNELS OF BEHAVIOUR [CH]
Online: web form, email, chat
Offline: phone call, walking to the help desk</td>
</tr>
<tr>
<td colspan="3">4. EMOTIONS BEFORE / AFTER [EM]
Before: frustrated, uncertain, stressed, overloaded
After: reassured, confident, in control, satisfied</td>
</tr>
</table>
